FileVault® 2 support for macOS virtual machines	•	

*Includes a plugin for Microsoft Visual Studio for debugging applications in virtual machines; Vagrant provider for Parallels; integration with Chef and Jenkins.

Simply enable Windows applications on Mac® for your employees

Windows on Mac for Everyone in Business

Seamlessly work with business-critical applications on your Mac like Microsoft Office, Internet Explorer, QuickBooks™, and hundreds of others. Ideal for any work environment, from education to financial services, technology, consulting, or medical.

Mass Deployment

Deploy Windows virtual machines with same configuration sets quickly and effortlessly. Optional Single Application deployment mode lets Mac users run a Windows application without being aware of Parallels Desktop and Windows running in a virtual machine.

License Management

Single license for all installations. In the Licensing Portal, view license expiration, usage statistics, and real-time licensing activities to easily manage all of your licensed computers. Administrators have the ability to see, deploy, deactivate, and blacklist licenses based on Mac computer host name, user name, and a serial number.

Security and Data Protection

IT admins are enabled to encrypt virtual machines' data, enforce external devices policies, restrict their users from changing Parallels Desktop and virtual machine settings, or create expiring virtual machines that will lock down once expired.

Fast, Powerful, Seamless, and Easy

Simply enable Windows applications on Mac® for your employees

The scientists and staff at La Jolla Institute for Allergy and Immunology use Mac devices for scientific research, but applications they use to track patents, contracts, and grants run only on PCs. Installing a Mac and PC for each person wasn't in the budget and would burden tech support. The institute needed a way to run both Mac OS and Windows.

"Parallels makes your workflow so much easier because you're not switching devices"

—Matt Wilce, Director of Coms and Annual Support

A seven-person IT team supports more than 1,500 machines in a school that uses Apple devices almost exclusively. Some staff in the technology, communications, and administrative departments use iMac® devices and are required to access several key Windows-only applications from Blackbaud for the administration and fundraising database.

"Parallels Desktop for Mac Business Edition solved everything we wanted and at the right price. It's low impact for the user and it's not complicated."

—Michael Scarpelli, Senior IT Manager
