

Parallels RAS Education

Software on demand, anywhere

"Within a single day, we were able to set up Parallels RAS and have a published application running in our environment. The performance of Parallels RAS is fantastic and provides our business college with the tools to meet any request from our faculty, staff, and students."

Dayton Perrin – Server Administrator III, Rawls College of Business

STUDENTS AND FACULTY

Our technology allows students and faculty to roam and continue working without losing their efforts. **No need to start over sessions or reconfigure printers and scanners.** Also, secure access is easy using either **smart cards or multifactor authentication** on mobile devices.

REDUCE HELP DESK TICKETS

Application centralization will reduce complexity while **cutting down up to 70% the number of trouble tickets**, time to update and manage applications.

STUDENTS LABS

Each year, efforts to recreate deliverable labs to students can be extensive and time-consuming. Our solution allows you to centralize the lab infrastructure and stream it to students. **Templates enable easy management and deployment.**

BYOD WITHOUT LOSING LICENSE CONTROL

Streaming applications and desktops minimizes deployment time, updates, and license control. When students and faculty end their terms, **no residual data or licenses stay in their own computers.**

PERVASIVE SECURITY

By delivering server-based desktops and applications from a central location, IT can easily back up endpoints, deploy and maintain security, and **meet compliance regulations.**
