# What's New in Parallels Mac Management 8

The latest version of Parallels® Mac Management for Microsoft® SCCM simplifies deploying applications, brings support for Apple Volume Purchase Program (VPP) and comes with IPv6 support for more efficient and secure networks.

Apple VPP Support

Streamline the deployment and inventory of company-owned App Store applications by managing them using the familiar SCCM.

Custom Inventory Reporting

Extend the granularity of the IT assets' control by reporting more detailed inventory information.

Active Directory Red Forest Design Support

Support for Enhanced Security Administrative Environment, also known as ESAE.

IPv6 Support

Support for IPv6 and mixed IPv6/IPv4 networks and take advantage of the modern network architecture.

New Task Sequence Step

Simplify the deployment of applications by silently approving needed KEXTs via MDM with no user distraction.

Microsoft

"SSCM is designed for extensibility, and the Parallels Mac Management plug-in was built to help expand and enhance System Center's management of Mac in enterprise environments."

Andrew Conway, Sr. Director Product Marketing, Microsoft
