

SIMA with Parallels RAS

ZUCCHETTI GROUP

The Results

“Parallels RAS in combination with Microsoft Azure has allowed us to simplify management and render faster deployments.”

Andrea Marchi, System Engineer

“End users are very pleased with the freedom to choose their device provided by Parallels RAS.”

Maurizio Rizzardi, Manager

BRING-YOUR-OWN-DEVICE (BYOD) INITIATIVES

Clients can use the device of their choice to access SIMA software

EASE OF USE AND STREAMLINED MANAGEMENT

Increased efficiency with simple centralized management

INCREASED SECURITY

Multifactor authentication (MFA) with advanced surveillance and reporting

INCREASED REMOTE ACCESSIBILITY

Instant reliable access to corporate applications globally

About SIMA

- Provides a software solution for managing national and international transport, logistics and shipping companies
- Based in Arco, Italy
- Part of the Zucchetti Group
- Founded in 1982

The Challenge

The sector in which SIMA operates is extremely dynamic and requires not only higher-level skills but also continuous innovation. As the creators of cutting-edge enterprise resource planning (ERP) software, SIMA needed a solution to publish their software to their clients' devices of choice, no matter their location.

SIMA initially chose to Microsoft Remote Desktop Services (RDS) but were not satisfied. They found the connection to be slow when using RemoteApp, causing unwanted delays and hassles for end users. Viewing this challenge as a chance to upgrade, SIMA decided to evaluate potential alternatives that would provide a fast and effective way to publish applications to clients and employees around the world.

The Solution

After exploring the leading solutions, the IT leaders at SIMA decided to implement Parallels® Remote Application Server (RAS) on Microsoft Azure Cloud Service. This combination enhances Microsoft RDS and allows SIMA to deliver secure access to applications.

As Parallels RAS supports iOS, Mac and Windows operating systems, end users are now able to access SIMA's software through their smartphones, tablets, Mac devices and PCs. Parallels RAS has increased SIMA's reporting and monitoring abilities, turning raw data into visual and intuitive reports and providing the IT team with a comprehensive infrastructure overview.

SIMA has also simplified session management and improved productivity by allowing IT managers to delegate specific tasks to low-level admins. Parallels RAS came equipped with universal printing—now users can print directly to their local printers from any session without the need for local driver installations.

The Results

Parallels RAS on Microsoft Azure provides a unique opportunity to offer employees and business partners faster, scalable and reliable access to corporate applications globally. Combined with Azure FSLogix technology, Parallels RAS allows SIMA to handle profile management for 600 concurrent users while simplifying the management of applications and providing a native-like working experience.

Clients are happy with the increased remote accessibility, and the ability to use the device of their choice has increased convenience and satisfaction. SIMA has utilized Parallels RAS to increase data security by implementing multifactor authentication (MFA). The simplicity of the centralized Parallels RAS console has also streamlined IT management and made remote troubleshooting straightforward, allowing IT staff to shadow end users to assist them remotely.

One feature that impressed the IT staff was driver redirection. They are now able to access all local drivers through HTML5 (including USB). Overall, Parallels RAS has served as a simple and effective way to publish applications to users regardless of location, allowing SIMA to focus on providing its software to its transport, shipping and logistics partners. technical questions for the Parallels support team, as they found the product to be relatively simple to use, especially considering how powerful it is. Overall, Banco Interfinanzas finds Parallels RAS to be a far superior solution for their needs and is planning to extend its use throughout their entire organization.
